

POSTMATIC Stamp Affixers

High Speed, High Production
Stamp Affixing Attachments

High Speed Postage Stamp Affixers.

Postmatic has more than 30 Years Experience manufacturing postage stamp affixing attachments and has been known to provide the best possible equipment and service in the industry. Heavy duty construction and high quality materials provide 24/7 operation and assures years of trouble free use.

Postmatic Stamp Affixers exclusive vacuum wheel applicator system eliminates the need to rewind the stamp coils when applying stamps inline with inserters. Large 3,000 or 10,000 coil capacity and applying speeds in excess of 18,000 per hour meets the demands of most high speed inserting equipment.

The **Ease of Operation** is quick and easy compared to most other label applicators. Fast and easy loading and unloading allows the operator to produce more throughput and spend less time tending to secondary operations.

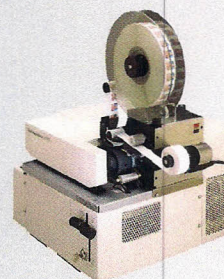

The **Model 6000SA** and the **Model 7000SA** were first manufactured in 1996 and has become the stamp affixer of choice by mailers across the country. Many mailers use their original units on a regular basis running them in a high volume, high production environment with little maintenance required. Many of these same units are now being used on our New Inline Stamping Bases in the same high volume, high production environments.

The **Model 6000SA** fits on our Inline Stamping Bases or Pitney Bowes® mailing machines.

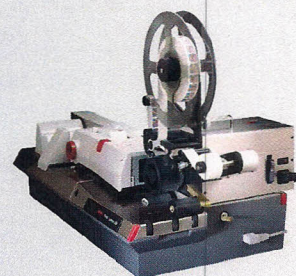

The **Model 7000SA** fits on our Inline Stamping Bases or the Hasler® mailing machines.

Inline Stamping Base w/M6000SA

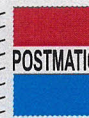

Pitney Bowes R-150 w/M6000SA

Hasler 320AS w/M7000SA

SPECIFICATIONS	OPERATING SPEEDS:	In excess of 18,000 p/hr
	STAMP COIL CAPACITY:	3,000 or 10,000
	STAMPS PER CYCLE:	One
	STAMP PLACEMENT:	Adjustable from leading edge
	VACUUM PUMP:	¼ hp GAST Carbon Vein
